

# Skyliners

By Naoki Kita and Dominic Castaneda

# About

This is a platform runner like game where the player(bird) will fly across the screen. The player will dodge enemy birds, helicopters, and planes that shoot bullets. There will also be power up items along the way to regain stamina.

The scene takes place in the night city

The goal of the game is to get the bird to the highest building for the last gem.

# How to Play

All the user needs to do is hit the left click button on the mouse and the bird will start moving forward and start flying higher. The higher you want to go the fast you need to click the left button.

To gain points collect the gems that scattered around the screen, but make sure you pay attention to how much stamina, starts at 100, you have left. Getting hit by bullets or hitting enemies will decrease your stamina and knock you back

To complete the game get the final gem that is on top of the building.

# Development features

- Main Menu
  - Start game or quit
- Pause Menu
  - Resume, back to main menu, or quit
- Animated 2D sprites for the player bird and enemies
- UI for the Stamina amount
- Scoring system
  - Grab gems to get points

## Where it will go from here

- Add more different level designs.
- Difficulty settings
- Adding more variety in enemies depending on the difficulty
- Different bird customizations
- Adding potions such as making bird fly higher or making it go faster for a temporary length
